

SMARTPHONE TRACKER

GPS tracking technology against theft and robbery
The most effective method to recover stolen merchandise.

Warehouse and Stores are continually being targeted by criminals, and are subject annually to more and more robberies and thefts, Traditional security measures such as safes, motion sensor, cameras and alarms are not enough to stop these thefts. These protective barriers are very important, but do not allow in any way to locating or recovering stolen goods after a theft or robbery has occurred.

Smartphone tracker is covertly packaged, and act as a bait item, that blend seamlessly whit your existing products in displays and safes. The thief will not know that he took a GPS tracking device during a robbery or theft that will bring him to arrest and recover stolen items. The device silently notify the crime, and automatically begin to report its location.

Place the devices in your showcase, warehouse stock, safe. Phone Tracker is identical to a normal phone package, but inside it there are 5 GPS tracking and recovering technologies

The device is ready to use for showcases and safes, it does not need installation and no maintenance required. Protection from criminals 24h a day, 365 days a year.

Security where criminals do not expect it !!

1 COVERT PROTECTION

If a theft occurs ..

- Motion detection activation, your device will alert you if a theft is detected
- Protect all your valuables 24h at day 365 days a year.
- Wireless charging, no visible ports, covert design.
- Globally coverage
- Long lasting battery; over 5 years whit a single charge.

SMARTPHONE TRACKER success stories

SMARTPHONE TRACKER, study case; September 2019 - Store Night theft

In September 2019, during the night, some thieves introduced into an electronics store in Berlin, Germany. They turned off the alarm system, avoided surveillance cameras, and managed to take away a large amount of stolen goods. SmartPhone Tracker was hidden among the smartphones. The device detected the theft, immediately reporting the change of position. The security officer and the police were immediately alerted with a warning message. It was enough to use the tracking system and follow the path of the criminals on the online map of ufogps website to intercept and stop them. SmartPhone Tracker allowed to recover all the stolen goods: 20 laptops, 4 iPads and 7 iPhones, for a total of more than 23.000€ of goods.

JEWELRY MICRO TRACKER, study case; JUNE 2019 - Night theft

Last June a burglary took place against a famous Roman jeweler. The thieves entered the jewelry at night, managing to deactivate the alarm system and escape the CCTV cameras that monitored the room. The value of the stolen goods was huge: about 150.000 € in jewels of various kinds. Jewelry Micro Tracker had been placed among the jewels. The thieves, without knowing it, also brought with them the tracker, who thanks to his movement sensor immediately detected the theft and alerted the owner of the jewelry and law enforcement. The police could follow the path of the criminals in real time on an online map, managing to recover the stolen goods and arrest the thieves in no time.
